

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	BARTON MEMORIAL HOSPITAL
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106090793
Report Period:	01/01/2024 - 12/31/2024
Status:	Submitted
Due Date:	09/30/2025
Last Updated:	02/27/2026
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	https://www.bartonhealth.org

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/>

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/ unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/ unknown languages category.

24048

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	21839	24048	90.8
Spanish Language	2004	24048	8.3
Asian Pacific Islander Languages	70	24048	0.3
Middle Eastern Languages	32	24048	0.1
American Sign Language	16	24048	0.1
Other Languages	81	24048	0.3

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

785

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

1216

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

64.6

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	63	8.0	0	0.0
Housing Instability	82	10.4	0	0.0
Transportation Problems	46	5.9	0	0.0
Utility Difficulties	24	3.1	0	0.0
Interpersonal Safety	suppressed	suppressed	suppressed	suppressed

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

164

Total number of respondents to HCAHPS Question 19

174

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

94.3

Total number of people surveyed on HCAHPS Question 19

829

Response rate, or the percentage of people who responded to HCAHPS Question 19

21.0

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

158

Total number of respondents to HCAHPS Question 17

174

Percentage of respondents who responded "yes" to HCAHPS Question 17

90.8

Total number of people surveyed on HCAHPS Question 17

829

Response rate, or the percentage of people who responded to HCAHPS Question 17

21.0

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarean birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

116

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

135

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

85.9

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

101

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

1320

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicaid	10.1	Private	4.8	2.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	9.1	Private	4.8	1.9
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	50 to 64	10.0	65 and older	8.9	1.1

Plan to address disparities identified in the data

At Barton Health, we have already begun a multidisciplinary deeper dive into the equity data to better understand where we can make the biggest difference and reduce gaps in care, with the goal of decreasing disparities for all patients, particularly those identified in the equity report. This work is in progress and will continue through 2026, with ongoing reviews to ensure we are meeting our goals. To address our top identified disparity populations of Medi-Cal, Medicare, and patients age 50-64, we have implemented a comprehensive plan that combines care coordination, patient education, social support, and community partnerships.

We are addressing our identified disparity populations through the following actions:

- Every inpatient is included every day in multidisciplinary rounds (MDRS).
- Every inpatient has an educational assessment completed and is evaluated by a case manager.
- Health literacy promotion through readback / teach back education.
- Translation and interpretive services for language and hearing barriers.
- Screen 100% of admitted patients using social determinants of health (SDOH). Using specific questions upon admission and discharge, we identify food insecurity, transportation and difficulty paying utilities as our patient population's most frequent challenges for our patients with Medi-Cal and Medicare.
- We refer patients to local food banks/pantries and soup kitchens (a list of these resources is provided in English and Spanish).
- We refer Medicare patients to paratransit for help with transportation to their medical appointments as well as certain Medi-Cal patients whose insurance plan allows. We also provide the local bus schedule and other local transportation options.
- For Medi-Cal and Medicare patients having difficulties paying for their utilities, we provide phone numbers of the utility companies' assistance programs (most have them). We partner with and make referrals to a community agency that will help our patients with certain expenses including utility bills. We also provide a list of local resources, in English and Spanish, that includes food banks, and other community resources that can be helpful to our patients.
- For patients whose plans do not offer home health care, we refer to the Population Health care managers for follow-up care when appropriate. Sometimes, we may keep these patients for an extra day in the hospital to ensure they have a safe discharge and to reduce the risk of readmission.
- We identify patients who will not qualify for Skilled Nursing Facility (SNF) placement promptly and notify the patient care team so they can work on mobility and strengthening as soon as appropriate; we often keep these patients an extra 1-2 days to work with physical therapy on strengthening and mobility to ensure a safe discharge and decreased risk of readmission.
- For added support to substance use disorder (SUD) patients in our community, including Medi-Cal and Medicare patients, we refer to our community SUD program AND/OR refer to Barton's medication assisted treatment (MAT) program for medication assisted treatment, refer our patients

to the substance use navigator for follow up post discharge, offer patients the option of the Sunshine Club from Alcoholics Anonymous (AA) to visit the patient while in the hospital and bring them to an AA meeting. We offer these options to help support patients while they are waiting for an inpatient rehabilitation bed to become available.

- We partnered with our local homeless program, Tahoe Coalition for the Homeless, to provide services to medically vulnerable unhoused patients. However, the Tahoe Coalition does not provide emergency shelter for unhoused patients who are not medically vulnerable, so Barton has also partnered with South Tahoe Police Department for shelter placement and transportation within our County however those shelters are 60 miles away and over a mountain pass for our homeless patients.

- As part of our Community Health Needs Assessment (CHNA) initiative, we have made several enhancements to improve access to care for our patients. Some include expanding psychiatry department to include two full-time LCSWs to provide outpatient therapy.

- To better support continuity of care, hospitalists see patients for hospital discharge follow-up at our rural health center, which cares for underserved and uninsured patients.

- Population Health nursing team conducts follow-up calls with patients after emergency room discharges to check on how they are doing and are able to help resolve barriers to follow-up care and ensure they have timely access to clinic appointments.

- As part of the CHNA, we also have more addiction medicine appointments to meet the needs of patients with substance use disorders. One of our doctors is board-certified in addiction medicine and two others are sitting for their boards in October 2025.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

Our mission is to deliver safe, high-quality care and engage the community in the improvement of health and wellness. To be put, we deliver consistently exceptional care. We provide consistently compassionate care founded on knowledge, grounded in evidence-based practice, demonstrated by competence, and guided by ethical values. We build relationships with effective communication based on empathic and caring behavior. Our consistently exceptional care reflects our understanding of patients' emotional, physical and spiritual needs. We support our diverse community through health literacy promotion, ethnic concordance, and translation and interpretive services for language and hearing barriers. We respect the health care needs of individuals through all stages of life.

We strive to deliver care that:

- Is thoughtful, individualized, and comprehensive care in a safe, nondiscriminatory environment.

- Utilizes a Shared Governance framework to provide a collaborative environment with all clinical service disciplines to ensure our practice is evidence based, competence driven, and integrated in approach.

- Effectively uses the nursing process (assessment, planning, intervention, and evaluation) to provide our patients with the highest level of quality care possible.

- Is individualized to patient, family-centered, and requires effective relationships, teamwork, and leadership to be effective.

- Encourages and support all care personnel to continually focus on life-long learning, striving for excellence with their scope of practice and training, demonstrate continual competence, have an opportunity for development of their potential, and be engaged in activities that improve overall patient care.
- Promotes professional practice by setting standards for professional conduct; formulating policies and standards of care that are evidenced-based; providing effective assessment, intervention, and promotion of health; promotion of healing; and communication across the care continuum.
- Routinely evaluates provider and nursing practice as well as care delivery to determine effectiveness and/or the need for improvement.
- Respects patient's rights and responsibilities, promotes a culture of safety, and utilizes our Just Culture framework.

Our operational practices are designed to support Person-Centered Care at every stage of the patient's experience. Each patient's plan of care is reviewed in daily multidisciplinary rounds, bringing together physicians, nurses, case managers, physical therapists, pharmacists, and other team members to ensure care is coordinated and individualized. Every patient also receives an educational needs assessment to ensure teaching is tailored to their literacy level and cultural background. Educational materials are available in the most common languages spoken within our community and offered in multiple formats to support different learning needs. Additionally, all patients are seen by a case manager to support discharge planning, address social determinants of health, and ensure safe transitions of care.

Patient safety

Our hospital defines patient safety as minimizing risks and harm during care, with equity at the center of our practice. We track safety indicators such as falls, medication errors, and hospital-acquired conditions through regular reviews and multidisciplinary rounds, and we examine whether outcomes vary across sociodemographic groups such as age, race/ethnicity, gender identity, sexual orientation, preferred language, disability status, payor, and sex to identify populations at greater risk. In reviewing events, we also consider language barriers, cultural context, and health literacy to keep prevention strategies patient-centered and equitable.

To reduce harm, we teach staff about cultural humility, bias, and interpreter use; we follow a Just Culture approach that promotes open reporting and system improvement. Translation and interpretive services are provided in the most common languages in our community, including American Sign Language, so patients fully understand their care. Patients and families are also active partners in safety, with families invited to join daily rounds, in addition to case managers who work closely with them to plan safe discharges that lower the risk of complications and readmissions.

Addressing patient social drivers of health

In 2025, we screened 100% of our admitted patients using Social Determinants of Health (SDOH) specific questions upon patient admission and discharge. Food insecurity, transportation and difficulty paying utilities were the most frequent challenges for our patients with Medi-Cal and Medicare insurance.

When needs are identified:

- We refer patients to local food banks/pantries and soup kitchens (a list of these resources is provided in English and Spanish).
- We refer Medicare patients to paratransit for help with transportation to their medical appointments as well as certain Medi-Cal patients whose insurance plan allows. We also provide the local bus schedule and other local transportation options.
- Patients having difficulties paying for their utilities, we provide phone numbers of the utility

companies' assistance programs (most have them). We partner with and make referrals to a community agency that will help our patients with certain expenses including utility bills. We also provide a list of local resources, in English and Spanish, that includes food banks, and other community resources that can be helpful to our patients.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Every patient who is hospitalized receives evidence based, timely and appropriate care regardless of age and/or payor. However, when discharge planning, patients may have limited choices based on their insurance. For example, some Medicare and Medi-Cal HMO plans may not offer Home Health to their subscribers. Also, insurance plans have set criteria that have to be met to qualify for skilled nursing and home health. Another example of this is Medi-Cal plans that are managed through the county have a set process for inpatient services for substance use disorder patients, however without rehab services in our County and with long wait lists, it is impossible for these patients to get inpatient services.

To address these challenges:

- For patients whose plans do not offer home health care, we refer to the Population Health care managers for follow-up care when appropriate. Sometimes, we may keep these patients for an extra day in the hospital to ensure they have a safe discharge and to reduce the risk of readmission.
- We identify patients who will not qualify for Skilled Nursing Facility (SNF) placement promptly and notify the patient care team so that the team can work on mobility and strengthening as soon as appropriate and often keep patients an extra day or two to work with physical therapy nursing on strengthening and mobility to ensure a safe discharge and decreased risk of readmission.
- For added support to substance use disorder (SUD) patients in our community, including Medi-Cal and Medicare patients, we refer to our community SUD program AND/OR refer to Barton's medication assisted treatment (MAT) program for medication assisted treatment, refer our patients to the substance use navigator for follow up post discharge, offer patients the option of the Sunshine Club from Alcoholics Anonymous (AA) to visit the patient while in the hospital and bring them to an AA meeting. We offer these options to help support patients while they are waiting for an inpatient rehabilitation bed to become available.

Care coordination

At Barton Health, 100% of admitted patients receive discharge planning services to assure a safe discharge plan according to their unique life situation. The case managers at Barton refer patients to services covered by their insurance and in their geographic location based on the patient and their family's preferences.

When services are limited due to insurance, or because we are in a rural mountain town, we partner with local resources within the community. For example, Barton has established services for Medi-Cal and Medicare patients who have substance use disorder by creating a medication assisted treatment program (MAT), hiring substance use navigators to provide support to patients at discharges, coordinating with local AA groups to meet patients while they are in the hospital.

Barton has also partnered with our local homeless program, Tahoe Coalition for the Homeless, to provide services to medically vulnerable unhoused patients. However, the Tahoe Coalition does not

provide emergency shelter for unhoused patients who are not medically vulnerable, so Barton has also partnered with South Tahoe Police Department for shelter placement and transportation within our County however those shelters are 60 miles away and over a mountain pass for our homeless patients.

Access to care

As part of our Community Health Needs Assessment (CHNA) initiative, we have made several enhancements to improve access to care for our patients. Some include expanding psychiatry department to include two full-time LCSWs to provide outpatient therapy. To better support continuity of care, hospitalists see patients for hospital discharge follow-up at our rural health center, which cares for underserved and uninsured patients. Additionally, our Population Health nursing team conducts follow-up calls with patients after emergency room discharges to check on how they are doing and to help resolve barriers to follow-up care and ensure they have timely access to clinic appointments. As part of the CHNA, we also have more addiction medicine appointments to meet the needs of patients with substance use disorders. One of our doctors is board-certified in addiction medicine and two others are sitting for their boards in October 2025.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
